DETAILED ACTION

Election/Restrictions

Claim 24 is withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Species, there being no allowable generic or linking claim.

Election was made **without** traverse in the reply filed on 3/29/06.

Claim Objections

Claim 27 is objected to because of the following informalities: In line 4 of claim 27 "with" should be --within--. Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kobayashi (6,220,231). Note a magnetic conditioning device for engine fuel comprising a housing element 4 configured to be placed along a fuel feeding line, the housing having a fuel inlet, a fuel outlet, top and bottom, two opposed ferromagnetic material elements (portions of 4, see last full paragraph of column 3) located within the housing element, a first of the two elements being at the top of the housing and a second of the two elements being at the bottom of the housing, permanent magnets 2 mounted on and between the two opposed ferromagnetic material elements, a fuel duct defined inside the housing element from the fuel inlet to the fuel outlet, the fuel duct being

between the top and the bottom of the housing and between the magnets, the magnets inducing a magnetic field between the two opposed ferromagnetic material elements and within the fuel duct, and the fuel duct turbulently deviating fuel entering the fuel inlet, through the magnetic field induced by the magnets, to the fuel outlet (see Figure 1). Kobayashi shows everything except employing the device in a diesel engine. It would have been obvious to one having ordinary skill in the art to modify Kobayashi by employing it in a diesel engine, in order to improve combustion characteristics.

Allowable Subject Matter

Claims 23, 25, and 26 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 27 and 28 are allowed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
